

The world of Etheros offers a fascinating investment experience!

Imagine a perfect world. A digitally reproduced image of the Earth based on full decentralization. A world founded on the basic principles of economics, where you can manage your property, invest, create goods and services, and trade.

Key facts about **ETHEROS**

- Option to designate successors – do not worry about the profits earned, goods and spaces you own.
- Anonymity - you enjoy complete anonymity in the Etheros world.
- Thanks to the use of the largest blockchain (Ethereum) providing smart contracts your assets are safe

In this world you can play, have fun, become the owner and user of any place or thing according to your imagination and create its value, and generate profits. You can invest in a piece of land in New York, an opal mine in Australia, or an oil rig in Norway or create completely new places, devices or solutions for this futuristic world. This is where you invest in your future! Simply owning a space is a "safe haven." It secures your property and even gives you the right to appoint your successor.

The Etheros platform is based on a protocol consisting of five mechanisms:

Consensus Mechanism

Spaces (i.e., squares of 1 km²) belong to owners, who manage them and determine their purpose. Thanks to the blockchain, they are the first to have the right to cast a vote.

Resource Mechanism

Spaces contain hidden natural resources (including cryptocurrencies), which can be mined, managed, produced, or resold.

Inheritance Mechanism

The owner of the given space and the objects located in it has the full right to designate a successor to their property at any time.

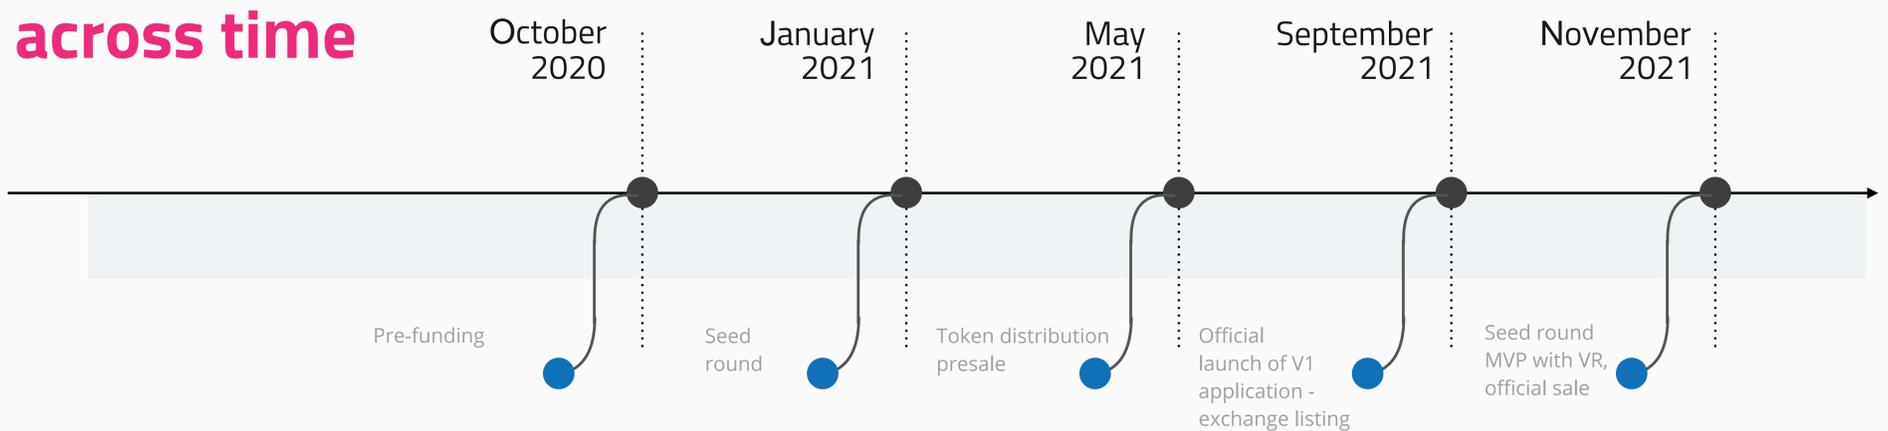

Matter Mechanism

The owner chooses which model of matter will be created - "real" (corresponding to the existing image of the world in that place) or virtual (created according to the user's imagination).

Action Mechanism

Users can engage in any private and commercial activities via the control panel. It enables them to manage their property digitally and everything else they intend to create – in a gaming mode.

Development of the project across time

Team of specialists

The Etheros team consists of specialists from various industries – professional, experienced and goal-oriented. We share common passions in areas such as blockchain, technology, decentralized finance, marketing, languages, personal development.

Token - ETS

ETS is the native token of the Ethers platform. Users (players) acquire or buy specific "fragments" of space, places, or things using the ETS token.

Starts on May 14th 14:00 CET
 Ends on May 31st 14:00 CET
 Total token supply 148.940.000 ETS
 No. of tokens IDO, IEO, ICO 30.000.000 ETS
 Soft Cap \$1.000.000
 Hard Cap \$5.000.000
 Price \$1.00
 Available on exchanges Mesa DEX, Uniswap
 Accepted cryptocurrencies ETH, BTC, USDC, USDT

Allocation

Maximum supply:
148,940,000 ETS

Ethers token address:
0xaEF76e2c14365aD2cE78a52fC8c224623c2657b6
